The intent of the Career, Technical and Agricultural Department is to provide engaging, rigorous and relevant technology integration to the teaching and learning environment. Websites accessed in the Clayton County Public School System's broadband go through a level of filtering to ensure that inappropriate sites are excluded. Where this happens, a "This Websense category is filtered: Proxy Avoidance. Sites in this category may pose a security threat to network resources or private information, and are blocked by your organization" page appears. The filtering levels may be: Option B: a restrictive level which permits only educational websites as well as sites on a pre-determined 'white list'; and Option A: a less restrictive system which allows only educational and related websites. If any Clayton County employee is granted access to an Internet site, it is the sole responsibility of that user to browse responsibly and to protect the system under his/her login.
